

HOW TO LAY LINK EDGE

USING LINK EDGE WILL GIVE YOU A HIGH CLASS FINISH TO YOUR GARDEN AREAS

INSTRUCTIONS

1. Clear the area, compact and level the base surface.
2. Place a length of Link Edge on the surface in the desired shape and position.
3. Starting at one end, half-hammer spikes into the pre-punctured holes in the Link Edge. Ensure the edge spikes are only half inserted into the surface.
4. Four spikes are recommended for every three metre length, however, more may be required in pivotal areas and at points where a bend or curve is desired.
5. If any additional lengths are required, slide a fishplate connector into the second Link Edge length.
6. Snap the second length to the fishplate connector to create a smooth, uninterrupted edge.
7. Ensure the position of the Link Edge is correct. If it needs to be repositioned, remove the edge spikes that had been half-hammered into the base surface and later the position.
8. Once satisfied with the position, firmly hammer the spikes into the ground.

CHECKLIST

- Link Edge 3mm lengths
- Fishplate connections
- Fishplate corners
- Edge Spikes (4 spikes for every length or more for curves)
- Personal Protection Equipment (e.g. gloves)
- Straight edge or rake for leveling ground Hammer
